ASSA ABLOY Entrance Systems

The global leader in
door opening solutions

Maximum strength and security

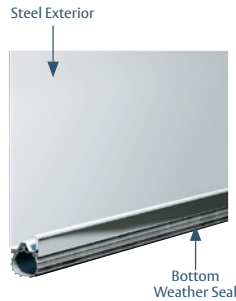

When your commercial or industrial building requires a sectional door that handles tough conditions, these extra heavy-duty doors stand up to the challenge. The 20-gauge steel front panel is the thickest we offer. Choose an open back design or add insulation to improve the energy efficiency and interior climate control for your building. Insulated doors are available with a vinyl backer or with 25-gauge steel for even greater strength, stability and security.

- 20-gauge steel front panel
- Deeply ribbed panel with a smooth texture
- Can be factory- or field-modified with CFC-free polystyrene insulation with a vinyl or steel backer for added protection
- Tongue and groove construction with three positive points of contact provides a more efficient barrier against moisture and air infiltration
- U-shaped vinyl bottom weather seal in a full-length PVC retainer effectively keeps out the elements
- Maximum width up to 26'2"
- Maximum height up to 26'1"
- Wind Load available
- Available with Rapid Install VL
- 10-Year Warranty**
